A NEW HIGH IN
PRACTICAL AUTOMATION

Everything you could ask for in a single lens reflex system

FEATURES

Here in one camera are the most advanced features, needed and wanted by professionals and advanced amateurs. Major features like those illustrated—and little touches that mean top quality, convenience and performance.

Automatic Diaphragm — Advance single-throw film wind lever, and instantaneously the diaphragm opens to its largest opening; film advances, shutter is cocked, counter registers.

Instant Return Mirror — Press shutter release. Instantaneously diaphragm closes down to your pre-selected aperture; mirror clears, film is exposed; mirror returns.

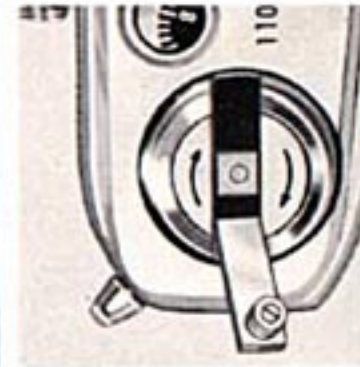

World's Brightest Viewing System — Condensing and fresnel lens system provides ultra-bright, fine grained corner-to-corner image.

Single, Non-Rotating Speed Dial from 1 to 1/1000 sec. and B locks into place. Can't be jarred or delayed by accidental touch of your finger.

Unique Self-Timer — Even though cocked, instantaneous exposures can be made 10 seconds, or fraction thereof can be set by simply positioning lever.

Rapid Rewind Crank ... Automatic Zero Return... Magnified Counter... exclusive, one-hand-operation camera-back release, etc.

ROKKOR LENSES:

All lenses are ultra-precision crafted of rare earths in platinum pots with a special double coating that eliminates the need for a UV filter. Minolta even makes their own glass. Thus, quality is controlled throughout to meet the most critical professional standards.

Auto Rokkor PF
55 mm, f:1.8 (Standard Lens) 6-element: 43° angle of view—focuses as close as 50 cm. (19.6 inches) **\$110**
